

Solid Earth indexed in the Science Citation Index Expanded

After assessing the quality, number and characteristics of papers published in Solid Earth since its first publication in February 2010, Thomson Reuters have announced that they will now be including the journal in their ISI listings. This is excellent news for the journal and reflects the tremendous effort of the editorial board, but even more importantly due to the trust by the scientific community in submitting their top research to Solid Earth. Also, for that community in having faith in EGU, its publications and its great synergy with Copernicus Publications. Thomson Reuters will be backdating the listing to the first issue of Solid Earth and we will all look forward to the announcement of its first Impact Factor in June 2013. Once again, we wish to thank wholeheartedly in the professionalism from Copernicus Publications, the quality of the authors and hence their research and papers that appear in Solid Earth. May this continue long in to the future.
